Biol. Chem. 276:1660-1664(2001).

1. FUNCTION: Receptor for the proinflammatory cytokines IL17B and IL17E. Way play a role in controlling the growth and/or differenciation of hematopoletic cells.

1. SUBCELLUIAR LOCATION: Type I membrane protein (isoform 1);

8 EGTORED (isoform 2).

1. ALTERNATIVE PRODUCES: 2 isoforms; 1 (shown here), and 2; are produced by alternative splicing.

1. TISSUE SPECIFICIATY: Expressed in several endocrine tissues, mostly in fetal and adult liver, kidney, pancreas, testis, colon, brain and small intestine; not detected in peripheral blood leukocytes, lymphold organs, and most cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Lee J., Ho W.H., Maruoka M., Corpuz R.T., Baldwin D.T., Foster J.S., Goddard A.D., Tansura D.G., Vandlen R.L., Wood W.I., Gurney A.L.; "IL-17E, a novel proinflammatory ligand for the IL-17 receptor homolog IL-17Rhl.";

Proviral integrations result in increased expression of ILL/BR on the cell surface.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Secreted (1soform 2).

**ALTERNATIVE PRODUCTS: 2 lsoforms; 1 (shown here) and 2; are produced by alternative splicing.

**TISSUE SPECIFICITY: Liver and testis. Expressed at lower level in kidney and lung. Expressed in selected T-cell, B-cell and myeloid
                                                                                                                                                                                                                                                                                                                                                                                       516 --IRDATHREPEARKKIAVVRFNYS--PHVPPNLAILNLPT-FILPEQFAQLAFLHNVE 570

-I-FUNCTION: Receptor for the proinflammatory cytokines IL17B and IL17F. May play a role in controlling the growth and/or differenciation of hematopoleito cells.
-I- SUBCELLULAR LOCATION: Type I membrane protein (180form 1);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mus musculus (Mouse).

 - STRICT CONTAINTY CONTAINTY OF THE STRAFFOLDANIN AND DYNAMIN I.

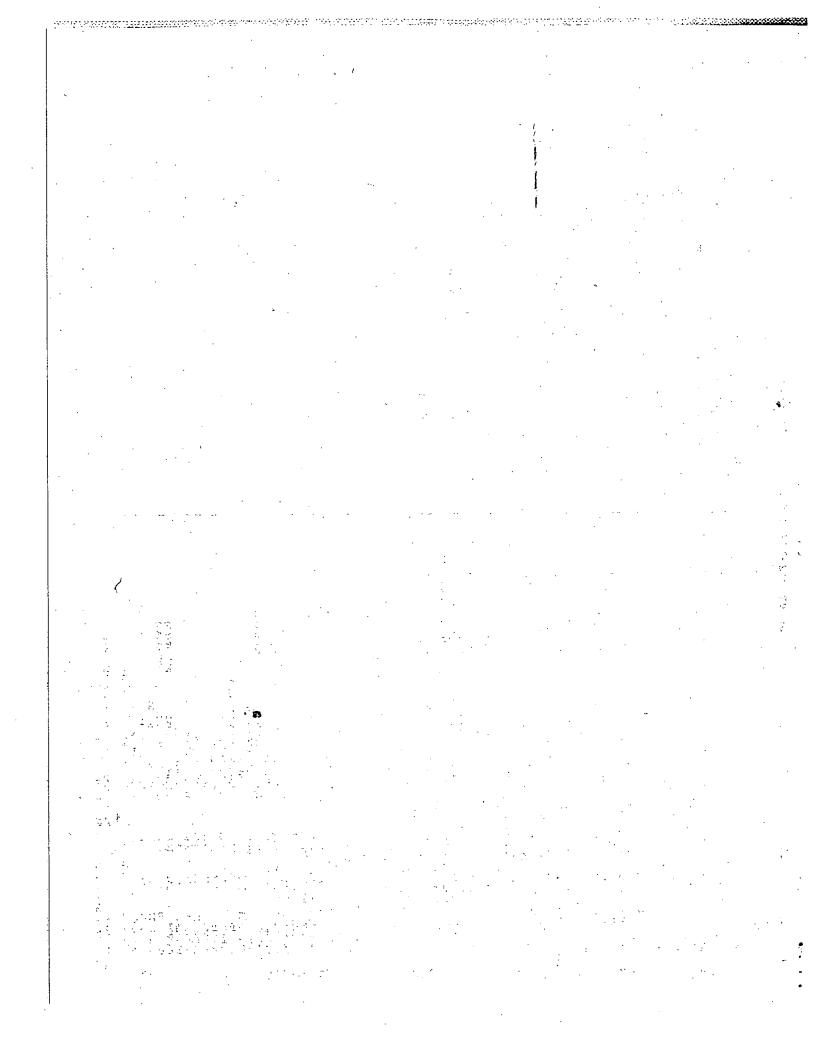

- SUBURITARITY: CONTAINS 1 SH3 DOWAIN.

- SIMILARITY: BELONGS TO THE ENDOPHILIN FAMILY.

- SIMILARITY: BELONGS TO THE ENDOPHILIN FAMILY.
